

## Job Title & Vacancy:

Simulator Apprentice (Vacancies: 1)

## Personnel Qualifications:

IELTS 4.0 or TOEIC 500 above

## Internship Contents:

### 1. Training Devices Operations:

Interns can understand the operating of training devices and the schedule for all Preventive Maintenance activities.

### 2. FSTD & CTD Management:

Understanding simulator quality management system and procedure manual. To experience Simulator Management System Software – TCMS is a recording system of a technical log in which defects, deferred defects and development work are listed, interpreted, actioned and reviewed within a specified time scale.

### 3. Parts Management:

Procedure required for FSTD Logistics and Procurement and maintaining processes for these activities within the FSTD operations.

### 4. Software Configuration Control:

To understand the process of full new software load released and the load deployment on simulators.

### 5. Daily Readiness Check:

To know a functional pre-flight check is performed daily as per the daily readiness checklist for each simulator.

### 6. Objective QTG & Subjective Fly-out Validation:

Familiarizing the necessary steps of analyzation and validation for simulator performance data and airport model updated.

Internship will give apprentices an opportunity to experience the operation of a simulator training center that fully complies with all applicable regulations and company policies. In addition to being familiar with various maintenance procedures, apprentices can also know how technicians and flight crews communicate and coordinate together to complete training tasks. Combining all the skills acquired will benefit you a lot at work in the future.
